

Automatic Dosing Insures Proper Results

Product/Service Information

A safe and compliant grease and oil interceptor program requires delivering the correct product, to the proper location, in the right volume, at all times. This can be very difficult to do if the grease interceptor product is dosed by hand.

Compliance GT is dispensed to the grease and oil interceptors through an automated pumping system. This is a safe and efficient delivery system that has been designed to meet your specific needs. The options include:

- Pumping system only
- Pumping system with feed timer
- Stainless steel shelf to mount the pumps

Consult with your local Alpine Technical Services Representative to determine which equipment best fits your needs. Call Randy McIff at 480-285-8738.

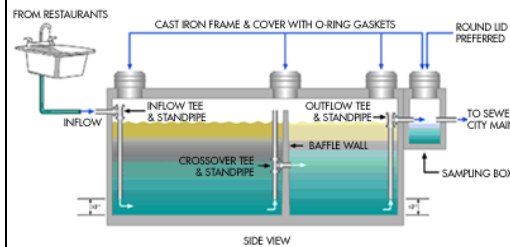

Walchem *Compliance GT* dosing pumps - 2 year comprehensive pump warranty.

BETTER THAN ENZYMES – AND MORE COST EFFECTIVE

The cost of complying with EPA wastewater restrictions can be significant. Most municipalities require the removal of fats, oils, and greases from the wastewater before being discharged into their sewer systems. Traditional treatment programs include the use of enzyme-based products, which are expensive, can be dangerous to handle, and are not always effective. Costs for failing to treat wastewater can be even higher, resulting in significant fines to the offending facility.

Alpine Technical Services is pleased to introduce an innovative and cost-effective solution to this problem. **Compliance GT** is a non-enzyme, chemical formula which separates fats, oils and greases from wastewater while simultaneously raising its pH level.

Compliance GT technology is fully supported by a Research and Development Lab.

EFFECTIVE

Compliance GT is an environmentally-safe liquid additive which effectively separates fats, oils and greases from wastewaters. **Compliance GT** is a pH enhancer. It also separates the total suspended solids and lowers the biological oxygen demand. **Compliance GT** is also much safer to handle than traditional treatment enzymes and chemicals, reducing potential liabilities in your facility.

ECONOMICAL

Compliance GT has been proven to be more effective than traditional products on the market, at a much lower operational cost. Why not put those savings in your pocket? . . . Instead of dumping them down the drain.

EASY TO USE

Compliance GT is a convenient liquid, available in 15 gallon Carboys, 55 gallon drums, 275 gallon totes, and bulk quantities.

Because it is a liquid, it can also be automatically metered into each use area. Alpine Technical Services representatives are available to assist you with the planning, installation, and ongoing service of your grease and oil interceptor program!
